

## *Contributors to this Issue*

*Chris Barter* is Professor and Chairman of the Department of Computer Science at the University of Adelaide. He graduated with a Ph.D. in Computer Science from the University of New South Wales in 1971. Professor Barter's research interests are in the areas of computer architecture (multi-processor and distributed computers), programming languages and artificial intelligence. He can be reached at [chris@cs.adelaide.edu.au](mailto:chris@cs.adelaide.edu.au).

*Luis-Felipe Cabrera* received his BS and MS degrees (Mathematics) from the Pontificia Universidad Catolica de Chile, Santiago in 1974 and 1975 respectively, and the MS degree and PhD degrees (Computer Science) from the University of California at Berkeley in 1979 and 1981 respectively. From 1981-1983 he was a faculty member in the Pontificia Universidad Catolica de Chile, being its Chairman during 1982-1983. In January 1984 he joined the faculty of the Computer Science Division of the Electrical Engineering and Computer Sciences Department at Berkeley. While at Berkeley his research focused on Performance Evaluation and Distributed Systems. During the summers of 1984 and 1985 he was the Research Supervisor of Berkeley's Computer Systems Research Group, CSRG, the makers of Berkeley Unix. In late 1985 he joined Computer Science Department of IBM Almaden Research Center. At Almaden he was the co-designer and co-builder of a transactional file service, QuickSilver DFS. He then helped start the research effort Melampus, that explores the limit when the operating system and the data base management system cease to be different and provide a common framework to administer all entities in a computing system. His current research interests include distributed computing systems, object-oriented systems, high-performance storage repositories, performance evaluation, and software performance. Dr. Cabrera has published some 40 research articles in journals and conference proceedings. He may be reached at [cabrera@ibm.com](mailto:cabrera@ibm.com).

*Vinny Cahill* received his BA and MSc degrees in Computer Science from Trinity College Dublin, Ireland. He is currently a lecturer in Computer Science at TCD where he is leading the team developing the

Amadeus distributed programming environment. His research interests include programming language and kernel support for distribution and fault tolerance. He can be reached at [vjcahill@cs.tcd.ie](mailto:vjcahill@cs.tcd.ie).

*Roy H. Campbell* received the B.Sc. degree in mathematics from the University of Sussex, Sussex, England in 1969 and the M.Sc. and Ph.D. degrees in computer science from the University of Newcastle upon Tyne, Newcastle-upon-Tyne, England in 1972 and 1977, respectively. Since 1976, he has been with the Department of Computer Science at the University of Illinois, Urbana and was promoted to Full Professor in 1985. He is the principal investigator of the Choices project which is developing a class-hierarchical object-oriented operating system for shared memory and distributed memory multiprocessors. His research interests include distributed and parallel systems, operating systems, programming language design, testing, and software engineering. Dr. Campbell is a member of the IEEE Computer Society and the Association for Computing Machinery. He may be reached at [campbell@cs.uiuc.edu](mailto:campbell@cs.uiuc.edu).

*Alan Dearle* did his Ph.D. at The University of St Andrews with Ron Morrison's Persistent Programming group. During this time he was a designer and implementator of the persistent programming language Napier88. In 1990 he moved to The University of Adelaide and works mainly on persistent languages, programming environments and store architectures. He is currently a reader in The Department of Computer Science at The University of Adelaide. He may be reached at [al@cs.adelaide.edu.au](mailto:al@cs.adelaide.edu.au).

*Nayeem Islam* received his B.S.E. in EECS from Princeton University in 1986, and MS in Computer Science from Stanford University in 1987 and is currently pursuing a PhD in Computer Science at the University of Illinois. From 1987 to 1990 he was at Sun Microsystems and was one of the developers of Openwindows. He has been associated with the Choices operating systems project since september 1990. His interests are in parallel and distributed operating systems and object-oriented programming. He may be reached at [nislam@cs.uiuc.edu](mailto:nislam@cs.uiuc.edu).

*Reinhold Kroeger* received the Diploma and the Dr. rer.nat. (Ph.D.) degrees in computer science from the University of Bonn, Federal Republic of Germany, in 1977 and 1983, respectively. Currently, he is heading the Relax project at GMD, the German National Research Center for Computer Science located at St. Augustin. His main research areas are dependable distributed computing, operating systems, object-oriented systems, transaction processing, and performance evaluation. Dr. Kroeger is member of the German Informatics Society (GI) and currently speaker of its special interest group on operating systems. He can be reached at [kroeger@gmd.de](mailto:kroeger@gmd.de)

*Tracy Lo Basso* is currently a contractor for Aspect Computing. She is engaged in work on electronic warfare simulation. After graduating from Adelaide University in 1989 she worked for the Department of Computer Science on the Casper project.

*Allen Luniewski* received his BS degree in Mathematics from Carnegie-Mellon University in 1974. In 1977 he received the SM and EE degrees in Computer Science from MIT. In 1979 he received a PhD in Computer Science from MIT. He worked from 1979 through 1986 for the Xerox Corporation where he worked on the Pilot operating system that was the basis for the Xerox Star product. He managed the Pilot effort for almost four years. In 1986 he joined the Computer Science Department of the IBM Almaden Research Center, working on the Quill project, an effort to design and build a WYSIWYG documentprocessing system based upon structured documents such as those describable by the SGML standard. From 1990 to 1991 he was a member of the Melampus project, an effort to explore a "database centric" computing environment. In 1991 he joined, and currently manages, the Rufus project. Rufus is exploring means to assist users in handling the large volume, and wide diversity, of information available from modern workstations.

*Peter Madany* received a BA in Math/Computer Science from Trinity Christian College in 1982, an MS in Computer Science from the Illinois Institute of Technology in 1984, and a PhD in Computer Science from the University of Illinois in 1992. From 1985 to 1988 he worked

on an embedded operating system for data network controllers at AT&T Bell Laboratories. He has been working on a distributed, object-oriented operating system project at Sun Microsystems since 1991. His interests include object-oriented programming, file systems, and distributed operating systems. He can be reached at [madany@eng.sun.com](mailto:madany@eng.sun.com).

*Chris Marlin* is currently Professor and Head of Computer Science at the Flinders University of South Australia. Following the completion of his Ph.D. at the University of Adelaide, he was an Assistant Professor of Computer Science at the University of Iowa. Prior to his present position at Flinders University, he was an Associate Professor at the University of Adelaide. His research has primarily been concerned with programming language design, specification and implementation, especially in relation to coroutines and parallel processes, and various aspects of integrated software development environments. He can be reached at [marlin@cs.adelaide.edu.au](mailto:marlin@cs.adelaide.edu.au).

*Michael Mock* received his Diploma degree in computer science from the University of Bonn, Federal Republic of Germany, in 1987. He is currently a researcher at GMD and is responsible for the development and application of an extensible, distributed transaction facility within the Relax project. His research interests include fault-tolerant distributed systems and object-orientation. He can be reached at [mock@gmd.de](mailto:mock@gmd.de).

*John Rosenberg* was educated at Monash University in Melbourne, Australia, where he completed a BSc(hons) majoring in Computer Science and a PhD in 1979. His doctoral work centred on the design of a new type of operating system kernel. He spent three years at Monash University as a Lecturer and then joined Fenwick Software as a Senior Consultant, working mainly on the design of large commercial systems. In 1984 he returned to Monash as Senior Lecturer. In 1986 Professor Rosenberg moved to the University of Newcastle (Australia) where he was promoted to Associate Professor and in 1991 he was appointed as Professor of Computer Science at the University of Sydney. Professor Rosenberg's research interests centre on architectural and operating system support for orthogonal persistence. He has been in-

volved in the design of three complete computer systems (both hardware and software) supporting these concepts and has published widely in this field. He can be contacted at [johnr@hunter.cs.su.oz.au](mailto:johnr@hunter.cs.su.oz.au).

*James W. Stamos* received the S.B. and S.M. degrees in computer science in 1982 and the PhD degree in computer science in 1986, all from the Massachusetts Institute of Technology, Cambridge. Since 1986 he has been a member of the research staff at the IBM Almaden Research Center. At IBM he initially worked on the ARBRE project, which investigated intra-transaction parallelism for relational database systems. He developed new algorithms for atomic commit, parallel join, and global deadlock detection. As a member of the Melampus and then the Rufus projects, he considered ways of exploiting queries in object-oriented and file-based computing environments. His research interests include distributed systems, database systems, and programming languages.

*Francis Vaughan* is currently a Ph.D. candidate at the University of Adelaide. Following graduation from the University of Adelaide in 1982 he worked as a programmer on a number of research projects. His research interests include operating system design with particular emphasis on reliability, distribution and very large persistent stores. He can be reached at [francis@cs.adelaide.edu.au](mailto:francis@cs.adelaide.edu.au).
