Contributors to This Issue

Luca Cardelli studied at the University of Pisa (until 1979) and holds a Ph.D. in Computer Science from the University of Edinburgh (1982). He worked at AT&T Bell Labs, Murray Hill, from 1982 to 1985 before assuming his current position at Digital Equipment Corporation, Systems Research Center in Palo Alto. His main interests are in constructive logic, type theory, and operational semantics, mostly for applications to language design, semantics, and implementation. He implemented the first compiler for ML and one of the earliest direct-manipulation user-interface editors. He was a member of the Modula-3 design committee, and has designed a few experimental languages, of which Obliq is the latest. His more protracted, as well as more recent, research activity has been in the semantic and type-theoretic foundations of object-oriented languages. He is a member of ACM, EATCS, IFIP WG 2.2, and IFIP WG 2.8. His home page is at http://www.research.digital.com/SRC/personal/Luca_Cardelli/info.html. He can be reached at luca@src.dec.com.

James C. French received a B.A. in Mathematics and M.S. and Ph.D. (1982) degrees in Computer Science, all at the University of Virginia. After several years in industry, he returned to the University of Virginia in 1987 as a Senior Scientist in the Institute for Parallel Computation and became a Research Assistant Professor of Computer Science in 1990. His current research interests include information retrieval in widely distributed information systems. Professor French is a member of the ACM, the IEEE Computer Society, SIAM, and Sigma Xi. He can be reached at french@virginia.edu.

Marshall Kirk McKusick got his undergraduate degree in Electrical Engineering from Cornell University. His graduate work was done at the University of California at Berkeley, where he received Masters degrees in Computer Science and in Business Administration, and a Ph.D. in the area of programming languages. While at Berkeley, he implemented the 4.2BSD fast file system, was involved in implementing the Berkeley Pascal system, and was the Research Computer Scientist at the Berkeley Computer Systems Research Group overseeing the development and release of 4.3BSD and 4.4BSD. He is currently writing a book on 4.4BSD and doing consulting on UNIX related subjects. He is a past president of the USENIX

Association, a member of the editorial board of *UNIX Review Magazine*, and a member of ACM and IEEE. He can be reached at mckusick@cs.berkeley.edu.

Charles L. Viles received a B.S. in Forestry (1984) from Virginia Tech and an M.S. in Computer Science (1988) from William and Mary. After his M.S., he worked for three years as a programmer and systems developer at the Virginia Institute of Marine Science building software and hardware systems for digital image analysis of oceanic plankton. In 1991, he entered the University of Virginia where he is currently a Ph.D. candidate in Computer Science. His research interests include distributed information retrieval, wide area networks, and computer science education. Viles is a member of the ACM. He can be reached at viles@virginia.edu.
